INTRODUCTION

This Starrett product is designed for ease of use and provides the ability to output measurements to a variety of peripherals, either through a traditional wire or by connecting to a Starrett DataSure® Wireless Data Collection System End Node.

Changing Battery

If a “B” is displayed on the left side of the display, the battery needs to be changed. Remove cartridge and replace with Lithium 3V CR2032 battery. Changing the battery will automatically reset the indicator to factory defaults.

To remove the cartridge, slide the battery carrier (2) in the direction of the arrow in Fig. 1. Remove the battery from the carrier and replace it with a fresh CR2032 battery. Then, slide the carrier back into the housing.

OPERATING INSTRUCTIONS

Button Functions

**MODE** and **SET** button operations are:
Press and Release and Press and Hold

**ON / OFF**

To turn gage **ON**:
Press and Release **ON/OFF**

To turn gage **OFF**:
Press and Hold **ON/OFF**

(Note: When the tool is turned on it will remain in whichever mode it was in when it was turned off.)
**Mode**

There are 5 Modes available: SET, REF I & REF II, PRESET, MIN / MAX, and TOLERANCE.

To change between Modes: Press and Hold **MODE**

**Set Mode**

Set Mode can calibrate / zero the tool to a Preset Reference Value (see Reference Mode), and to change the units-of-measure.

**Note:** If measurements are to be taken from this mode, the Hold function is not available, and when the SET key (also used as ZERO and HOLD) is pressed, the display will be zeroed to the REF I or II preset value.

To enter the Set Mode:
Press and Hold **MODE** until **INCH/MM** and **SET** appears

To change between MM / INCH:
Press and Release **MODE**

To calibrate / zero the tool:
Press and Release **SET**

**Taking Measurements**

Measurements can be taken from: SET, REF I, REF II, MIN / MAX, and TOLERANCE Modes
Reference Mode

REF I and REF II Modes will allow for two independent preset values to be set up.
(Ex. REF I = 0.0000 / Zero, REF II = .74990 / Gage Master)

Entering a Preset Reference Value

Note: The tool needs to be in the correct REF Mode before the preset value of that REF can be entered.
(To change See Reference Mode below)
Press and Hold MODE until REF I or II and PRESET appears

To change digit value:
Press and Release SET

To move cursor to right:
Press and Release MODE

To store preset value:
Press and Hold MODE until REF I or II appears

MEASUREMENTS CAN NOW BE TAKEN

Measuring in Reference Mode

To enter Reference Mode:
Press and Hold MODE until REF I or REF II appears

RECALL PRESET REFERENCE VALUE

Used to calibrate the gage to a preset value, provided REF I or REF II preset values have been set (See Entering Preset Reference Values). NOTE: The recalled value depends on the REF MODE the tool is in.
Press and Hold MODE until INCH/MM and SET appears
Place the gage into the Gage Master
Press and Release SET

To change between REF I and REF II:
Press and Release MODE

To save tool in this mode:
Press and Hold MODE until REF I OR II appears

MEASUREMENTS CAN NOW BE TAKEN

Measuring in MIN / MAX Mode

To enter MIN / MAX MODE:
Press and Hold MODE until MIN MAX and SET appears

MEASUREMENTS CAN NOW BE TAKEN

To view Min Reading:
Press and Release MODE

To clear previous measurement value:
Press and Release SET

To view Max Reading:
Press and Release MODE

To zero display in MIN MAX MODE:
Press and Release SET

MIN / MAX Mode

Used to display Min and Max measurement values on the gage

Note: Min and Max displayed values are based on the preset value of the REF Mode which the tool is in when entering the MIN / MAX Mode.
Tolerance Mode
Used to set gage with upper and lower measurement tolerances.

Setting Tolerances
Press and Hold MODE until TOL appears

To preset lower tolerance value:
Press and Release MODE

To change digit value:
Press and Release SET

To advance to next digit:
Press and Release MODE

To store lower value and advance to upper tolerance:
Press and Hold MODE until TOL ▼ appears

Measuring in Tolerance Mode
To enter TOLERANCE MODE:
Press and Hold MODE until TOL appears

Hold
Used to hold a measurement value on the display.

Note: Hold function is not available when in the Set Modes.

Data Transmission
This tool comes with an Opto-RS232 output port (Fig. 1 [3]) that allows data transmission thru a traditional wire to a variety of peripherals or by connecting to a Starrett DataSure® Wireless Data Collection System using a Cat.1500-3-1N end node.

The print command is controlled by the SET button.

To send data transmission with the cable or end node attached:
Press and Release SET
